LEROY-SOMER™
KATO ENGINEERING™

Factory Remanufacturing

As maintenance and capital investment budgets are scrutinized, many companies are beginning to recognize the value of refurbishing existing assets nearing the end of their life cycle. Kato Engineering offers cost-effective remanufacturing services to help you extend the useful life cycle of your KATO™ and Leroy Somer alternators.

Improved processes, stringent quality controls and re-engineered supply chains return worn, end-of-life alternators to a like-new state with comparable performance. All remanufacturing is done at our factories in North Mankato, MN and Lexington, TN to ensure exact specifications and high workmanship standards are met. Remanufactured alternators leave with a new factory warranty (12 months) with the option to extend the warranty to five years.

Through the following capabilities, you can be assured of a superior factory original product competitively priced with a quick turnaround.

- Genuine replacement parts made to original specifications
- The best insulation system in the industry
- A complete resin VPI system on all rewinds
- Wash and blast booths
- Two-plane dynamic rotor balancing
- Complete factory testing or factory acceptance testing
- Certified ISO 9001 quality standards
- ABS certified and ATEX licensed
