

Vertical Form Fill & Seal

Application Overview

Vertical Form Fill Seal (VFFS) machines are compact, flexible packaging machines used in a wide variety of products from powdered foods to potting soils and liquids such as water and lotions. Packages take the form of pillow packs to four sided sealed pouches offering consumers attractive and convenient containers.

Key functions are tension control, registration mark capture, synchronized motion, and real-time sealing control.

Application requirements

Control

- Synchronized axis
- High speed product registration
- Uniform seal and cut
- Flexible package size/type

Connectivity

- Simple product change and adjustment
- Versatile communications across hardware
- Help

System Costs

- Reduce hardware costs
- Reduce development time

Control Techniques' Solutions

Servo Drives and Motors, VFDs, and HMIs

- Programmable electronic camming
- Standard drive to drive cable
- Registration capture to 1µsec.
- Blended moves
- Position mode to torque mode during operation
- Create/load recipes from CTVue HMI

Vertical Form Fill & Seal Solutions

Control Techniques' Performance Advantages

Built-in Functions

- High speed registration
- Blended moves
- Position to torque mode during operation

Advanced Control and Tuning

- Electronic cams
- Real time programs
- Real time timers for precise control

Software

- PowerTools Pro
- Complimentary software
- Intuitive

Distributed Control

- Programmable drives
- Drive to Drive communications
- Ethernet or RS485

Cubic-Spline	Master (s)	Follower (Feet)	Interpol
17	4.080000	9.8900	5 Cubic
