DC Spirit DC Drives	Revision Level: A Date: 10/19/2015

PRODUCT OVERVIEW

The DC Spirit series was a microprocessor based DC variable speed DC motor control introduced by EPT Emerson Power Transmission in 1993 and was marketed by Morse/Browning. It had an output range of 2.5 to 250 HP. The drive came in regenerative and non-regenerative configurations. It accepted a 3-phase input of 208, 240, 380, 415, or 480 V.

CURRENT LIFECYCLE STATUS

The current status of the DC Spirit DC drives is "Obsolete". Control Techniques no longer provides repair services or replacement part support. Production capability of DC Spirit drives no longer exist. Upgrade assistance to current product is available.

PENDING LIFECYCLE STATUS CHANGES

None.

REPLACEMENT PRODUCT

The **Quantum MP** replaces the DC Spirit quite easily for almost all applications. The Quantum MP offers much more application flexibility and fieldbus interconnectivity. Drive software tools are free and are available on our website for download.

For full details of the Quantum MP product range or if you need assistance with product selection and conversion please visit the DC Drives page on the Control Techniques website.

Please visit our Upgrade Assistance page for product upgrade assistance and contact information.
