

Course Outline

Product : Unidrive M600~M702

Course : Introduction

Duration : 2 Day

Aims

This course aims to provide delegates with an introduction to the Unidrive M600~M702 family of AC drives with an emphasis on maintenance in order to increase understanding, familiarity and confidence when working with the product.

Suitable for operators and maintenance personnel who install, operate and monitor this equipment. The course is also appropriate for those who may carry out minor adjustments to the drive but do not necessarily make significant changes to the program or processes.

Prerequisites

- Electrical and Electronic knowledge.
- Basic Computer skills.
- Although desktop computers are available during training, it may be more advantageous for attendees to provide their own laptops (Microsoft XP operating system onwards) with administrator access to install the software.

Content

The following subjects are covered over 2 days:

- AC Drives & Motors Basics
- Unidrive M600~M702 Hardware and Features
- Installation
- Programming Parameters
- Getting Started and Commissioning
- Maintenance
- Smartcard Operation
- Software Diagnostics Tools

The course is equally split between instructor guided theory and 'hands on' practical work, allowing delegates to simulate plant behaviour in a safe environment.

Location

This course is delivered at the purpose-built Control Techniques Academy located in Newtown, Wales.

Courses can also be taken to any suitable location, please enquire for details.

Costs

Delivered at the Control Techniques Academy, this course is charged at £600 per person.

Onsite training courses are calculated according to location and attendees. Please contact the Control Techniques Academy for a personalised quote.
