About US

The HVACR business under Nidec was established in 1890 in St. Louis, Mo., as the foundation business of Emerson Electric Manufacturing Company. John Wesley Emerson, a Civil War veteran, established Emerson Electric Manufacturing Company to manufacture electric motors using a patent owned by Scottish-born brothers Charles and Alexander Meston. In 1892, Emerson's business became the first to sell electric fans in the United States. He quickly expanded the product line to include electric sewing machines, electric dental drills and power tools.

While Emerson was expanding in St. Louis, the United States Electrical Manufacturing Company in Los Angeles, Ca., had some aspirations of its own. With just 17 employees and a 4,000 square-foot facility, the company began building electrical motors under the U.S. MOTORS® brand in 1908. The U.S. MOTORS brand grew and earned an outstanding reputation over the next 50 years. By 1962, Emerson Electric acquired the company and it became U.S. Electrical Motors Division of Emerson Electric Co. The merger strengthened both companies and added a strong group of products to the Emerson family.

Today, U.S. MOTORS is Nidec Motor Corporation's flagship brand, offering a full complement of induction or EC Motors designed for single or three phase applications. U.S. MOTORS stands for innovation, quality and reliability in the industrial and commercial markets. Rely on US for all your aftermarket motor needs.

COMPANY PROFILE

Details

- World's #1 motor manufacturer and leader in technology

- Same-day and next-day shipping are available upon request

USMOTORS.COM WEBSITE

- Extensive cross-reference database, product information and equipment model parts breakdowns.

TECHNOLOGICALLY ADVANCED PRODUCTS

We have launched new products designed specifically for the HVACR aftermarket including EcoTech®, MOJAVE®, PEP®, RESCUE®, RESCUE Select Pro™ and Aqua-Shield®. As motor technologies shift to accommodate energy efficiency standards, we'll provide comprehensive training and support on these advanced technologies.

We also offer draft inducers, capacitors, fan blades, variable frequency drives, compressors and condensing units to help you expand your business beyond motors.
